

Fixers™ is a biofertilizer with a unique mixture of naturally occurring bacteria and fungi that work together to promote both soil and plant health. Biofertilizers increase nutrient availability by fixing nitrogen, solubilizing phosphorus, and restoring the soils natural nutrient cycles.

Benefits of Fixers™ bio-fertilizer:

- 100% natural
- No GMO's
- Completely biodegradable
- Non-toxic and non-pathenogenic making it safe for people, plants, and animals.
- No risk of chemical burns or over fertilization of plants
- Not derived from petroleum or petroleum based products
- Continues working over long periods
- Improves overall soil health
- Helps protect roots from pests and pathogens
- Enhances drought tolerance
- Powerful seed inoculant
- Increases absorbtion of complex organic materials by the root system

Application:

- Fixers™ is Perishable- the fertilizer should be put in the ground in the first 6 months after it's fermentation to ensure a high bacteria count.
- Plant type:
 - Turf and Lawn: use 1 lb. per 1500 sqft. Wet after application.
 - Potted plants: apply 2 tbsp./cubic foot of soil. This ratio is applicable to mixing with soil or compost.
 - Flowering Plants: 2 tbsp./plant.
 - Soil Treatment: 2 tbsp./cubic foot
 - Seed Inoculant- fill paper bag with fine peat dust and seeds or bulbs. Close bag and shake. The peat will stick electrostatically to the bulbs or seeds. Plant immediately.

About Single Cell Solutions

Single Cell Solutions, Inc. is a microorganism and enzyme product development and consulting company. We develop environmentally friendly, non-hazardous solutions for the Petrochemical, Janitorial and Sanitation, and Agricultural industries.

Single Cell Solutions was formed in 2010, and is based in Houston, Texas.
