

Geologists estimate that 80% of all oil reserves are still trapped in their reservoirs, unable to be pumped to the surface due to high paraffin count, diminished pressure, or economically unfeasible amounts of water.

Phoenix's proprietary advanced oil recovery product works by injecting our proprietary mix, (and even some non-producing) wells. When combined with our nutrient mix, our microorganisms produce enzymes which do the following:

- ✓ Creates a powerful biosurfactant that reduces the interfacial tension between unrecovered oil molecules and rock or water surfaces
- ✓ Disperses paraffin and reduces viscosity
- ✓ Increases the oil's API
- ✓ Restore permeability in between the pores of the rock
- ✓ Works with conventional methods such as water and CO2 flooding

PHOENIXTM

Well Rejuvenator

Microbial EOR results in increased production, less downtime, and the extension of the well's economic lifespan.

About SlingShot Oil & Gas

SlingShot Oil & Gas is a microorganism and enzyme product development and consulting company. We develop environmentally friendly, non-hazardous solutions for the Petrochemical and Agricultural industries.

SlingShot Oil & Gas was formed in 2014, and is based in Houston, Texas.
